Lead Editor: Ewan Buckingham

Technical Reviewer: Andy Olsen

Editorial Board: Clay Andres, Steve Anglin, Mark Beckner, Ewan Buckingham, Tony Campbell,

Gary Cornell, Jonathan Gennick, Michelle Lowman, Matthew Moodie, Duncan Parkes, Jeffrey Pepper,

Douglas Pundick, Frank Pohlmann, Ben Renow-Clarke, Dominic Shakeshaft, Matt Wade, Tom Welsh

Production Director / Project Manager: Grace Wong

Copy Editors: Kim Wimpsett, Damon Larson

Associate Production Director: Kari Brooks-Copony

Production Editor: Laura Esterman

Compositor: Susan Glinert

Proofreader: Nancy Bell

Indexer: Broccoli Information Management

Artist: April Milne

Cover Designer: Kurt Krames

Manufacturing Director: Tom Debolski

Distributed to the book trade worldwide by Springer-Verlag New York, Inc., 233 Spring Street, 6th Floor, New York, NY 10013. Phone 1-800-SPRINGER, fax 201-348-4505, e-mail orders-ny@springer-sbm.com, or visit <http://www.springeronline.com>.

Contents at a Glance

About the Authors	xxxi
About the Technical Reviewer	xxxiii
Introduction	xxxv

PART 1 ■■■ Core Concepts

■ CHAPTER 1	Introducing ASP.NET	3
■ CHAPTER 2	Visual Studio	21
■ CHAPTER 3	Web Forms	69
■ CHAPTER 4	Server Controls	113
■ CHAPTER 5	ASP.NET Applications	165
■ CHAPTER 6	State Management	217

PART 2 ■■■ Data Access

■ CHAPTER 7	ADO.NET Fundamentals	257
■ CHAPTER 8	Data Components and the DataSet	295
■ CHAPTER 9	Data Binding	337
■ CHAPTER 10	Rich Data Controls	381
■ CHAPTER 11	Caching and Asynchronous Pages	447
■ CHAPTER 12	Files and Streams	493
■ CHAPTER 13	LINQ	527
■ CHAPTER 14	XML	583

PART 3 ■■■ Building ASP.NET Websites

■ CHAPTER 15	User Controls	641
■ CHAPTER 16	Themes and Master Pages	661

■ CHAPTER 17	Website Navigation	691
■ CHAPTER 18	Website Deployment	741

PART 4 ■■■ Security

■ CHAPTER 19	The ASP.NET Security Model	823
■ CHAPTER 20	Forms Authentication	855
■ CHAPTER 21	Membership	881
■ CHAPTER 22	Windows Authentication	935
■ CHAPTER 23	Authorization and Roles	971
■ CHAPTER 24	Profiles	1005
■ CHAPTER 25	Cryptography	1037
■ CHAPTER 26	Custom Membership Providers	1067

PART 5 ■■■ Advanced User Interface

■ CHAPTER 27	Custom Server Controls	1105
■ CHAPTER 28	Design-Time Support	1147
■ CHAPTER 29	Dynamic Graphics and GDI+	1179
■ CHAPTER 30	Portals with Web Part Pages	1211

PART 6 ■■■ Client-Side Programming

■ CHAPTER 31	JavaScript and Ajax Techniques	1269
■ CHAPTER 32	ASP.NET AJAX	1319
■ CHAPTER 33	Silverlight 2	1383
■ INDEX	1441

Contents

About the Authors	xxxi
About the Technical Reviewer	xxxiii
Introduction	xxxv

PART 1 ■■■ Core Concepts

■ CHAPTER 1	Introducing ASP.NET	3
	The Evolution of Web Development	3
	The Early Web Development World	4
	.NET Revolution	4
	Seven Important Facts About ASP.NET	4
	Fact 1: ASP.NET Is Integrated with the .NET Framework	5
	Fact 2: ASP.NET Is Compiled, Not Interpreted	5
	Fact 3: ASP.NET Is Multilanguage	7
	Fact 4: ASP.NET Is Hosted by the Common Language Runtime	9
	Fact 5: ASP.NET Is Object-Oriented	10
	Fact 6: ASP.NET Is Multidevice and Multibrowser	12
	Fact 7: ASP.NET Is Easy to Deploy and Configure	12
	ASP.NET: The Story Continues	13
	ASP.NET 2.0	13
	ASP.NET 3.5	14
	.NET 3.5 Service Pack 1	18
	Silverlight	19
	Summary	20
■ CHAPTER 2	Visual Studio	21
	The .NET Development Model	22
	The Compiler	22
	The Visual Studio IDE	23
	Websites and Web Projects	24
	Creating a Projectless Website	24
	Multitargeting	27
	Designing a Web Page	28

The Visual Studio IDE	34
Solution Explorer.....	36
Document Window	37
Toolbox	37
Error List and Task List	38
Server Explorer	40
The Code Editor	40
Adding Assembly References	41
IntelliSense and Outlining	44
The Code Model	46
How Code-Behind Files Are Connected to Pages	49
How Control Tags Are Connected to Page Variables	50
How Events Are Connected to Event Handlers	51
Web Projects	53
Creating a Web Project.....	54
Migrating a Website from a Previous Version of Visual Studio ...	56
Visual Studio Debugging	57
Single-Step Debugging	58
Variable Watches	61
Advanced Breakpoints	62
Visual Studio Macros	63
The Web Development Helper	65
Summary	67

■ CHAPTER 3 **Web Forms**

Page Processing	69
HTML Forms	70
Dynamic User Interface	71
The ASP.NET Event Model	72
Automatic Postbacks	73
View State	75
XHTML Compliance	80
Web Forms Processing Stages	84
Page Framework Initialization.....	85
User Code Initialization.....	86
Validation	86
Event Handling	87
Automatic Data Binding	87
Cleanup	88
A Page Flow Example.....	88

The Page As a Control Container	90
Showing the Control Tree	91
The Page Header	95
Dynamic Control Creation	96
The Page Class	97
Session, Application, and Cache	98
Request	98
Response	100
Server	102
User	105
Trace	105
Accessing the HTTP Context in Another Class	111
Summary	112

CHAPTER 4 **Server Controls** 113

Types of Server Controls	113
The Server Control Hierarchy	114
HTML Server Controls	116
The HtmlControl Class	117
The HtmlContainerControl Class	117
The HtmlInputControl Class	117
The HTML Server Control Classes	118
Setting Style Attributes and Other Properties	120
Programmatically Creating Server Controls	121
Handling Server-Side Events	123
Web Controls	125
The WebControl Base Class	127
Basic Web Control Classes	128
Units	130
Enumerations	130
Colors	131
Fonts	131
Focus	133
The Default Button	134
Scrollable Panels	135
Handling Web Control Events	135
The List Controls	138
The Selectable List Controls	140
The BulletedList Control	142

Input Validation Controls	144
The Validation Controls	144
The Validation Process	145
The BaseValidator Class	146
The RequiredFieldValidator Control	148
The RangeValidator Control	148
The CompareValidator Control	149
The RegularExpressionValidator Control	149
The CustomValidator Control	152
The ValidationSummary Control	154
Using the Validators Programmatically	155
Validation Groups	156
Rich Controls	158
The AdRotator Control	159
The Calendar Control	161
Summary	163

■ CHAPTER 5 **ASP.NET Applications** 165

Anatomy of an ASP.NET Application	165
The Application Domain	166
Application Lifetime	167
Application Updates	167
Application Directory Structure	168
The global.asax Application File	169
Application Events	171
Demonstrating Application Events	173
ASP.NET Configuration	174
The machine.config File	174
The web.config File	177
<system.web> Settings	181
Reading and Writing Configuration Sections Programmatically ..	185
The Website Administration Tool (WAT)	188
Extending the Configuration File Structure	190
Encrypting Configuration Sections	194
.NET Components	196
Creating a Component	197
Using a Component Through the App_Code Directory	198
Using a Component Through the Bin Directory	199

Extending the HTTP Pipeline	201
HTTP Handlers and HTTP Modules	202
Creating a Custom HTTP Handler	204
Configuring a Custom HTTP Handler	205
Registering HTTP Handlers Without Configuring IIS	206
Creating an Advanced HTTP Handler	208
Creating an HTTP Handler for Non-HTML Content	210
Creating a Custom HTTP Module	213
Summary	216

■ CHAPTER 6 **State Management** 217

ASP.NET State Management	217
View State	220
A View State Example	221
Storing Objects in View State	222
Retaining Member Variables	225
Assessing View State	226
View State Security	228
Transferring Information Between Pages	229
The Query String	229
Cross-Page Posting	231
Cookies	238
Session State	239
Session Architecture	239
Using Session State	241
Configuring Session State	242
Securing Session State	248
Application State	249
Static Application Variables	251
Summary	253

PART 2 ■■■ **Data Access**

■ CHAPTER 7 **ADO.NET Fundamentals** 257

The ADO.NET Architecture	258
ADO.NET Data Providers	258
Standardization in ADO.NET	260
Fundamental ADO.NET Classes	261

The Connection Class	262
Connection Strings	262
Testing a Connection	264
Connection Pooling	265
Connection Statistics	267
The Command and DataReader Classes	268
Command Basics	268
The DataReader Class	269
The ExecuteReader() Method and the DataReader	270
The ExecuteScalar() Method	275
The ExecuteNonQuery() Method	276
SQL Injection Attacks	276
Using Parameterized Commands	279
Calling Stored Procedures	281
Transactions	283
Transactions and ASP.NET Applications	284
Isolation Levels	288
Savepoints	290
Provider-Agnostic Code	291
Creating the Factory	291
Create Objects with Factory	292
A Query with Provider-Agnostic Code	293
Summary	294

CHAPTER 8 Data Components and the DataSet	295
Building a Data Access Component	295
The Data Package	296
The Stored Procedures	298
The Data Utility Class	299
Testing the Database Component	305
Disconnected Data	307
Web Applications and the DataSet	308
XML Integration	309
The DataSet	309
The DataAdapter Class	311
Filling a DataSet	312
Working with Multiple Tables and Relationships	313
Searching for Specific Rows	317
Using the DataSet in a Data Access Class	318
Data Binding	319

The DataView Class	319
Sorting with a DataView	320
Filtering with a DataView	321
Advanced Filtering with Relationships	323
Calculated Columns	324
Typed DataSets	326
Custom TableAdapters	327
Creating a Typed DataSet	328
Dissecting the Typed DataSet	330
Using the Typed DataSet	333
Summary	335

■ CHAPTER 9 **Data Binding** 337

Basic Data Binding	337
Single-Value Binding	338
Other Types of Expressions	340
Repeated-Value Binding	344
Data Source Controls	351
The Page Life Cycle with Data Binding	352
The SqlDataSource	353
Selecting Records	353
Parameterized Commands	356
Handling Errors	360
Updating Records	361
Deleting Records	365
Inserting Records	366
Disadvantages of the SqlDataSource	366
The ObjectDataSource	367
Selecting Records	368
Updating Records	373
Updating with a Data Object	373
The Limits of the Data Source Controls	377
The Problem	377
Adding the Extra Items	378
Handling the Extra Options with the SqlDataSource	379
Handling the Extra Options with the ObjectDataSource	380
Summary	380

CHAPTER 10 Rich Data Controls	381
The GridView	382
Defining Columns	382
Formatting the GridView	386
Formatting Fields	386
Styles	388
Formatting-Specific Values	391
GridView Row Selection	393
Using Selection to Create a Master-Details Form	394
The SelectedIndexChanged Event	396
Using a Data Field As a Select Button	397
Sorting the GridView	397
Sorting with the SqlDataSource	398
Sorting with the ObjectDataSource	398
Sorting and Selection	400
Advanced Sorting	401
Paging the GridView	402
Automatic Paging	403
Custom Pagination with the ObjectDataSource	404
Customizing the Pager Bar	407
GridView Templates	408
Using Multiple Templates	410
Editing Templates in Visual Studio	411
Binding to a Method	412
Handling Events in a Template	413
Editing with a Template	414
The ListView	419
Grouping	422
Paging	424
The DetailsView and FormView	425
The DetailsView	425
The FormView	428
Advanced Grids	429
Summaries in the GridView	430
A Parent/Child View in a Single Table	431
Editing a Field Using a Lookup Table	434
Serving Images from a Database	436
Detecting Concurrency Conflicts	441
Summary	446

CHAPTER 11 Caching and Asynchronous Pages	447
Understanding ASP.NET Caching	447
Output Caching	448
Declarative Output Caching	448
Caching and the Query String	449
Caching with Specific Query String Parameters	450
Custom Caching Control	451
Caching with the HttpCachePolicy Class	452
Post-Cache Substitution and Fragment Caching	453
Cache Profiles	455
Cache Configuration	456
Data Caching	457
Adding Items to the Cache	458
A Simple Cache Test	460
Cache Priorities	461
Caching with the Data Source Controls	462
Cache Dependencies	465
File and Cache Item Dependencies	465
Aggregate Dependencies	466
The Item Removed Callback	467
Understanding SQL Cache Notifications	469
Cache Notifications in SQL Server 2000	470
Cache Notifications in SQL Server 2005 and SQL Server 2008	475
Custom Cache Dependencies	477
A Basic Custom Cache Dependency	478
A Custom Cache Dependency Using Message Queues	479
Asynchronous Pages	481
Creating an Asynchronous Page	482
Querying Data in an Asynchronous Page	484
Handling Errors	486
Using Caching with Asynchronous Tasks	488
Multiple Asynchronous Tasks and Timeouts	491
Summary	492

CHAPTER 12	Files and Streams	493
	Working with the File System	493
	The Directory and File Classes	494
	The DirectoryInfo and FileInfo Classes	496
	The DriveInfo Class	499
	Working with Attributes	500
	Filter Files with Wildcards	502
	Retrieving File Version Information	502
	The Path Class	503
	A File Browser	506
	Reading and Writing Files with Streams	510
	Text Files	512
	Binary Files	513
	Uploading Files	514
	Making Files Safe for Multiple Users	516
	Compression	521
	Serialization	522
	Summary	525
CHAPTER 13	LINQ	527
	LINQ Basics	527
	Deferred Execution	529
	How LINQ Works	530
	LINQ Expressions	530
	LINQ Expressions “Under the Hood”	537
	LINQ to DataSet	540
	Typed DataSets	542
	Null Values	543
	LINQ to SQL	543
	Data Entity Classes	544
	The DataContext	546
	LINQ to SQL Queries “Under the Hood”	547
	LINQ to SQL and Database Components	550
	Selecting a Single Record or Value	552
	Generating Data Classes Automatically	553
	Relationships	559
	Generating Methods for Stored Procedures	567
	Committing Changes	569

The LinqDataSource	574
Displaying Data	575
Getting Related Data	578
Editing Data	579
Validation	579
Summary	582
CHAPTER 14 XML	583
When Does Using XML Make Sense?	583
An Introduction to XML	584
The Advantages of XML	585
Well-Formed XML	586
XML Namespaces	586
XML Schemas	588
Stream-Based XML Processing	590
Writing XML Files	590
Reading XML Files	593
In-Memory XML Processing	596
The XmlDocument	597
The XPathNavigator	601
The XDocument	603
Searching XML Content	608
Searching with XmlDocument	608
Searching XmlDocument with XPath	611
Searching XDocument with LINQ	613
Validating XML Content	615
A Basic Schema	615
Validating with XmlDocument	615
Validating with XDocument	617
Transforming XML Content	618
A Basic Stylesheet	618
Using XslCompiledTransform	619
Using the Xml Control	621
Transforming XML with LINQ to XML	621

XML Data Binding	623
Nonhierarchical Binding.....	623
Using XPath	625
Nested Grids	628
Hierarchical Binding with the TreeView	629
Using XSLT	631
Binding to XML Content from Other Sources.....	633
Updating XML Through the XmlDataSource	633
XML and the ADO.NET DataSet	634
Converting the DataSet to XML.....	635
Accessing a DataSet As XML.....	636
Summary	638

PART 3 ■■■ Building ASP.NET Websites

■ CHAPTER 15 User Controls	641
User Control Basics	641
Creating a Simple User Control	642
Converting a Page to a User Control.....	643
Adding Code to a User Control	644
Handling Events	644
Adding Properties	645
Using Custom Objects	647
Adding Events	650
Exposing the Inner Web Control	653
Dynamically Loading User Controls	653
Portal Frameworks	654
Partial Page Caching	657
VaryByControl	658
Sharing Cached Controls	659
Summary	659
■ CHAPTER 16 Themes and Master Pages	661
Cascading Style Sheets	661
Creating a Stylesheet.....	661
Applying Stylesheet Rules	664

Themes	666
Theme Folders and Skins	667
Applying a Simple Theme	668
Handling Theme Conflicts	669
Creating Multiple Skins for the Same Control	670
Skins with Templates and Images	671
Using CSS in a Theme	673
Applying Themes Through a Configuration File	673
Applying Themes Dynamically	674
Standardizing Website Layout	676
Master Page Basics	676
A Simple Master Page	677
A Simple Content Page	679
Default Content	680
Master Pages with Tables and CSS Layout	681
Master Pages and Relative Paths	683
Applying Master Pages Through a Configuration File	684
Advanced Master Pages	685
Interacting with the Master Page Class	685
Dynamically Setting a Master Page	686
Nesting Master Pages	687
Summary	689

■ CHAPTER 17 Website Navigation 691

Pages with Multiple Views	691
The MultiView Control	692
The Wizard Control	696
Site Maps	703
Defining a Site Map	704
Binding to a Site Map	706
Breadcrumbs	707
Showing a Portion of the Site Map	709
The Site Map Objects	712
Adding Custom Site Map Information	714
Creating a Custom SiteMapProvider	714
URL Mapping	721
Security Trimming	722

The TreeView Control	724
The TreeNode	725
Populating Nodes on Demand	727
TreeView Styles	729
The Menu Control	733
Menu Styles	736
Menu Templates	737
Summary	739

■ CHAPTER 18 Website Deployment

741

Internet Information Services (IIS)	741
IIS Websites and Virtual Directories	742
IIS Management Console and IIS Configuration	743
Mapping Websites, Virtual Directories, and Files to URLs	744
Diving into the Architecture of IIS	746
Installing IIS	761
Managing Websites	767
Managing Virtual Directories and Websites with IIS 5.x and IIS 6.0	768
Managing Application Pools in IIS 6.0	774
Managing Virtual Directories and Websites with IIS 7.0	780
Managing Application Pools in IIS 7.0	792
Deploying Your ASP.NET Applications	794
Verifying the ASP.NET Installation on IIS 5.x and IIS 6.0	796
ASP.NET Side-By-Side Execution on IIS 5.x and IIS 6.0	797
ASP.NET Side-By-Side Execution on IIS 7.0	799
Configuring HTTP Runtime Settings when Deploying on IIS 5.x	799
Compilation Models in ASP.NET	800
Deploying with Visual Studio	804
Visual Studio 2005 Web Deployment Projects	805
The VirtualPathProvider in ASP.NET	811
Health Monitoring in ASP.NET	815
Understanding the Basic Structure	816
Events and Providers	816
Summary	819

PART 4 ■■■ Security

CHAPTER 19	The ASP.NET Security Model	823
	What It Means to Create Secure Software	823
	Understanding Potential Threats	824
	Secure Coding Guidelines	824
	Understanding Gatekeepers	825
	Understanding the Levels of Security	826
	Authentication	827
	Authorization	828
	Confidentiality and Integrity	829
	Pulling It All Together	829
	Internet Information Services Security	831
	Authentication and Authorization on IIS 5.x and IIS 6.0	831
	Security Configuration on IIS 7.0	834
	Understanding Secure Sockets Layer	839
	ASP.NET Security Architecture	848
	Authentication	849
	Authorization	851
	The Security Context	851
	Membership and Roles APIs	853
	Summary	854
CHAPTER 20	Forms Authentication	855
	Introducing Forms Authentication	855
	Why Use Forms Authentication?	856
	Why Would You Not Use Forms Authentication?	858
	Why Not Implement Cookie Authentication Yourself?	859
	The Forms Authentication Classes	860
	Implementing Forms Authentication	861
	Configuring Forms Authentication	861
	Denying Access to Anonymous Users	865
	Creating a Custom Login Page	865
	Custom Credentials Store	872
	Persistent Cookies in Forms Authentication	873
	IIS 7.0 and Forms Authentication	874
	Summary	880

CHAPTER 21	Membership	881
	Introducing the ASP.NET Membership API	881
	Using the Membership API	884
	Configuring Forms Authentication	885
	Creating the Data Store	886
	Configuring Connection String and Membership Provider	892
	Creating and Authenticating Users	896
	Using the Security Controls	898
	The Login Control	900
	The LoginStatus Control	910
	The LoginView Control	911
	The PasswordRecovery Control	912
	The ChangePassword Control	917
	The CreateUserWizard Control	918
	Configuring Membership in IIS 7.0	922
	Configuring Providers and Users	922
	Using the Membership API with Other Applications	924
	Using the Membership Class	926
	Retrieving Users from the Store	926
	Updating Users in the Store	929
	Creating and Deleting Users	929
	Validating Users	930
	Using Membership in Windows Forms	931
	Summary	933
CHAPTER 22	Windows Authentication	935
	Introducing Windows Authentication	935
	Why Use Windows Authentication?	936
	Why Would You Not Use Windows Authentication?	937
	Mechanisms for Windows Authentication	938
	Implementing Windows Authentication	944
	Configuring IIS 5.x or IIS 6.0	944
	Configuring IIS 7.0	946
	Configuring ASP.NET	948
	Denying Access to Anonymous Users	951
	Accessing Windows User Information	953

Impersonation	958
Impersonation in Windows 2000	959
Impersonation on Windows XP	960
Impersonation and Delegation on Windows Server 2003	960
Impersonation on Windows Vista	963
Impersonation and Delegation on Windows Server 2008	964
Configured Impersonation	964
Programmatic Impersonation	966
Summary	969
 CHAPTER 23 Authorization and Roles	971
URL Authorization	971
Authorization Rules	972
File Authorization	977
Authorization Checks in Code	978
Using the IsInRole() Method	978
Using the PrincipalPermission Class	979
Using the Roles API for Role-Based Authorization	981
Using the LoginView Control with Roles	987
Accessing Roles Programmatically	988
Using the Roles API with Windows Authentication	990
Protecting Non-ASP.NET Resources in IIS 5 and 6	993
Adding a File Type Mapping	993
Writing a Custom HTTP Handler	994
Authorization and Roles in IIS 7.0	996
Authorization with ASP.NET Roles in IIS 7.0	998
Managing ASP.NET Roles with IIS 7.0	1001
Summary	1002
 CHAPTER 24 Profiles	1005
Understanding Profiles	1005
Profile Performance	1005
How Profiles Store Data	1006
Profiles and Authentication	1007
Profiles vs. Custom Data Components	1007

Using the SqlProfileProvider	1008
Creating the Profile Tables	1008
Configuring the Provider	1011
Defining Profile Properties	1012
Using Profile Properties	1013
Profile Serialization	1014
Profile Groups	1016
Profiles and Custom Data Types	1017
The Profiles API	1020
Anonymous Profiles	1022
Custom Profile Providers	1025
The Custom Profile Provider Classes	1025
Designing the FactoredProfileProvider	1027
Coding the FactoredProfileProvider	1029
Testing the FactoredProfileProvider	1033
Summary	1036

■ CHAPTER 25 **Cryptography** 1037

Encrypting Data: Confidentiality Matters	1037
The .NET Cryptography Namespace	1038
Understanding the .NET Cryptography Classes	1042
Symmetric Encryption Algorithms	1043
Asymmetric Encryption	1044
The Abstract Encryption Classes	1045
The ICryptoTransform Interface	1046
The CryptoStream Class	1046
Encrypting Sensitive Data	1047
Managing Secrets	1048
Using Symmetric Algorithms	1049
Using Asymmetric Algorithms	1054
Encrypting Sensitive Data in a Database	1057
Encrypting the Query String	1061
Wrapping the Query String	1062
Creating a Test Page	1065
Summary	1066

CHAPTER 26 Custom Membership Providers	1067
Architecture of Custom Providers	1067
Basic Steps for Creating Custom Providers	1069
Overall Design of the Custom Provider	1069
Designing and Implementing the Custom Store	1070
Implementing the Provider Classes	1078
Using the Custom Provider Classes	1098
Summary	1102

PART 5 ■■■ Advanced User Interface

CHAPTER 27 Custom Server Controls	1105
Custom Server Control Basics	1105
Creating a Bare-Bones Custom Control	1106
Using a Custom Control	1108
Custom Controls in the Toolbox	1109
Creating a Web Control That Supports Style Properties	1110
The Rendering Process	1114
Dealing with Different Browsers	1115
The HtmlTextWriter	1115
Browser Detection	1116
Browser Properties	1118
Overriding Browser Type Detection	1120
Adaptive Rendering	1121
Control State and Events	1123
View State	1123
Control State	1125
Postback Data and Change Events	1127
Triggering a Postback	1129
Extending Existing Web Controls	1131
Composite Controls	1131
End SidebarDerived Controls	1134
Template Controls	1137
Creating a Template Control	1137
Using Customized Templates	1139
Styles	1144
Summary	1146

CHAPTER 28	Design-Time Support	1147
	The Key Players	1147
	Design-Time Attributes	1148
	The Properties Window	1149
	Attributes and Inheritance	1153
	The Toolbox Icon	1154
	Web Resources	1155
	Creating a Resource	1155
	Retrieving a Resource	1156
	Text Substitution	1157
	Code Serialization	1158
	Type Converters	1158
	Serialization Attributes	1166
	Type Editors	1168
	Control Designers	1170
	Design-Time HTML	1171
	Smart Tags	1173
	Summary	1178
 CHAPTER 29	 Dynamic Graphics and GDI+	 1179
	The ImageMap Control	1179
	Creating Hotspots	1180
	Handling Hotspot Clicks	1181
	A Custom Hotspot	1182
	Drawing with GDI+	1184
	Simple Drawing	1185
	Image Format and Quality	1187
	The Graphics Class	1188
	Using a GraphicsPath	1190
	Pens	1191
	Brushes	1194
	Embedding Dynamic Graphics in a Web Page	1195
	Using the PNG Format	1196
	Passing Information to Dynamic Images	1197
	Custom Controls That Use GDI+	1200
	Charting with GDI+	1204
	Summary	1209

CHAPTER 30	Portals with Web Part Pages	1211
	Typical Portal Pages	1212
	Basic Web Part Pages	1213
	Creating the Page Design	1214
	WebPartManager and WebPartZone Controls	1215
	Adding Web Parts to the Page	1217
	Customizing the Page	1220
	Creating Web Parts	1222
	Simple Web Part Tasks	1223
	Developing Advanced Web Parts	1231
	Web Part Editors	1240
	Connecting Web Parts	1246
	Custom Verbs and Web Parts	1254
	User Controls and Advanced Web Parts	1255
	Uploading Web Parts Dynamically	1258
	Authorizing Web Parts	1264
	Final Tasks for Personalization	1264
	Summary	1265

PART 6 ■■■ Client-Side Programming

CHAPTER 31	JavaScript and Ajax Techniques	1269
	JavaScript Essentials	1269
	The HTML Document Object Model	1270
	Client-Side Events	1271
	Script Blocks	1273
	Manipulating HTML Elements	1275
	Debugging JavaScript	1276
	Basic JavaScript Examples	1278
	Creating a JavaScript Page Processor	1278
	Using JavaScript to Download Images Asynchronously	1281
	Rendering Script Blocks	1286
	Script Injection Attacks	1287
	Request Validation	1287
	Disabling Request Validation	1288
	Custom Controls with JavaScript	1290
	Pop-Up Windows	1290
	Rollover Buttons	1294

Frames	1297
Frame Navigation	1298
Inline Frames.....	1299
Understanding Ajax	1300
The XMLHttpRequest Object	1301
An Ajax Example	1303
Using Ajax with Client Callbacks	1307
Creating a Client Callback	1307
Client Callbacks “Under the Hood”	1313
Client Callbacks in Custom Controls.....	1314
Summary	1318

■ CHAPTER 32 **ASP.NET AJAX** 1319

Introducing ASP.NET AJAX	1319
ASP.NET AJAX on the Client: The Script Libraries	1320
ASP.NET AJAX on the Server: The ScriptManager	1321
Server Callbacks	1322
Web Services in ASP.NET AJAX	1323
The Web Service Proxy	1330
Placing a Web Method in a Page	1331
ASP.NET AJAX Application Services.....	1333
ASP.NET AJAX Server Controls	1339
Partial Rendering with the UpdatePanel.....	1340
Timed Refreshes with the Timer.....	1348
Time-Consuming Updates with UpdateProgress.....	1349
Managing Browser History.....	1352
Deeper into the Client Libraries	1356
Understanding the Client Model	1356
Object-Oriented Programming in JavaScript.....	1357
The Web-Page Framework	1365
Control Extenders	1371
Installing the ASP.NET AJAX Control Toolkit	1371
The AutoCompleteExtender.....	1373
The ASP.NET AJAX Control Toolkit.....	1376
Summary	1381

CHAPTER 33 Silverlight 2	1383
Understanding Silverlight	1384
Silverlight vs. Flash	1386
Silverlight System Requirements	1387
Installing the Silverlight Tools for Visual Studio	1388
Creating a Silverlight Solution	1389
Silverlight Compilation	1390
Entry Pages	1391
Creating a Silverlight Project	1396
Designing a Silverlight Page	1397
Understanding XAML	1401
Setting Properties	1402
The XAML Code-Behind	1403
Handling Events	1405
Browsing the Silverlight Class Libraries	1406
Layout	1407
The Canvas	1408
The Grid	1413
Animation	1417
Animation Basics	1418
Defining an Animation	1418
The Storyboard Class	1419
An Interactive Animation Example	1422
Transforms	1425
Silverlight and ASP.NET	1429
Using Web Services with Silverlight	1429
The MediaPlayer Control	1435
Summary	1439
INDEX	1441

About the Authors

■ **MATTHEW MACDONALD** is an author, educator, and Microsoft MVP. He's a regular contributor to programming journals and the author of more than a dozen books about .NET programming, including *Pro Silverlight 2 in C# 2008* (Apress, 2008), *Pro WPF in C# 2008* (Apress, 2008), and *Beginning ASP.NET 3.5 in C# 2008* (Apress, 2007). He lives in Toronto with his wife and two daughters.

■ **MARIO SZPUSZTA** works as an architect in the Developer and Platform Group of Microsoft Austria, and helps software architects of top enterprise and web customers with establishing new Microsoft technologies. For several years, he has been focusing on secure software development, web services and interoperability, and integration of Microsoft Office clients and servers in custom applications. Mario speaks regularly at local and international conferences, such as DevDays and TechEd Europe Developers, and has been a technical content owner of TechEd Europe Developers for the past two years, as well.

About the Technical Reviewer

■ **ANDY OLSEN** is a freelance developer and consultant based in the United Kingdom. Andy has been working with .NET since the beta 1 days and has coauthored and reviewed several books for Apress, covering C#, Visual Basic, ASP.NET, and other topics. Andy is a keen football and rugby fan and enjoys running and skiing (badly). Andy lives by the seaside in Swansea with his wife, Jayne, and children, Emily and Thomas, who have just discovered the thrills of surfing and look much cooler than he ever will!

Introduction

As you no doubt already know, ASP.NET is Microsoft's next-generation technology for creating server-side web applications. It's built on the Microsoft .NET Framework, which is a cluster of closely related new technologies that revolutionize everything from database access to distributed applications. ASP.NET is one of the most important components of the .NET Framework—it's the part that enables you to develop high-performance web applications.

It's not hard to get developers interested in ASP.NET. Without exaggeration, ASP.NET is the most complete platform for web development that's ever been put together. It far outclasses its predecessor, ASP, which was designed as a quick-and-dirty set of tools for inserting dynamic content into ordinary web pages. By contrast, ASP.NET is a full-blown platform for developing comprehensive, blisteringly fast *web applications*.

In this book, you'll learn everything you need to master ASP.NET 3.5. If you've programmed with a previous version of ASP.NET, you can focus on new features such as LINQ (Chapter 13), ASP.NET AJAX (Chapter 32), and Silverlight (Chapter 33). If you've never programmed with ASP.NET, you'll find that this book provides a well-paced tour that leads you through all the fundamentals, along with a backstage pass that lets you see how the ASP.NET internals *really* work. The only requirement for this book is that you have a solid understanding of the C# language and the basics of .NET. If you're a seasoned Java or C++ developer but you're new to C#, you may find it easier to start with a book about .NET fundamentals, such as *Pro C# 2008 and the .NET 3.5 Platform*, by Andrew Troelsen (Apress, 2007).

What Does This Book Cover?

Here is a quick breakdown of what you'll find in this book:

Part 1: Core Concepts: You'll begin in Chapter 1 with a look at the overall ASP.NET platform, the .NET Framework, and an overview of the changes that have taken place in ASP.NET 3.5. In Chapter 2 you'll branch out to learn the tools of the trade—namely, Visual Studio 2008. In Chapters 3, 4, 5, and 6 you'll learn the key parts of the ASP.NET infrastructure, such as the web-page model, application configuration, and state management. As you learn these core concepts, you'll also take a low-level look at how ASP.NET processes requests and manages the lifetime of your web applications. You'll even learn how to extend the ASP.NET architecture.

Part 2: Data Access: This part tackles one of the core problem domains for all software development—accessing and manipulating data. In Chapters 7 and 8 you'll consider the fundamentals of ADO.NET as they apply to web applications and learn how to design data access components. In Chapters 9 and 10 you'll learn about ASP.NET's set of innovative data bound controls that let you format and present data without writing pages of code. Chapter 11 branches out into advanced caching strategies that ensure first-class performance. Finally, Chapters 12, 13, and 14 move beyond the world of ADO.NET to show you how to work with files, LINQ, and XML content.

Part 3: Building ASP.NET Websites: In this part you'll learn about essential techniques and features for managing groups of web pages. You'll start simply with user controls in Chapter 15, which allow you to reuse segments of the user interface. In Chapter 16 you'll consider two new ASP.NET innovations—themes (for styling controls automatically) and master pages (for reusing a layout template across multiple pages). Chapter 17 shows how you can use ASP.NET's navigation model to let visitors surf from one page to another. Finally, Chapter 18 describes deployment and the IIS web server software.

Part 4: Security: In this part, you'll look at ASP.NET's rich complement of security features. You'll start with a high-level overview of security concepts in Chapter 19 and then learn the ins and outs of forms authentication (Chapter 20) and the membership feature that works with it (Chapter 21). In Chapter 22 you'll tackle Windows authentication, and in Chapter 23 you'll learn how to restrict authenticated users with sophisticated authorization rules and use role-based security. In Chapter 24 you'll explore the profiles feature—a new, prebuilt solution for storing user-specific information; and in Chapter 25 you'll go one step further and learn how to protect the data you store in a database as well as the information you send in a URL with encryption. Finally, Chapter 26 shows how you can plug into the ASP.NET security model by designing a custom membership provider.

Part 5: Advanced User Interface: This part shows how you can extend web pages with advanced techniques. In Chapters 27 and 28 you'll tackle custom controls. In Chapter 29 you'll branch out to use GDI+ for handcrafted graphics. Finally, Chapter 30 explores ASP.NET's Web Parts feature, which allows you to easily create web portals.

Part 6: Client-Side Programming: In this part, you'll consider some of the most exciting innovations in modern web development. First, in Chapters 31 and 32, you'll consider how to use JavaScript and Ajax techniques in your ASP.NET web pages. You'll learn how to make web pages more dynamic (by incorporating effects like text autocompletion and drag-and-drop) and more responsive (by reacting to client-side events and seamlessly refreshing the web page). In Chapter 33, you'll dive into the world of Silverlight, a Microsoft-built browser plug-in that gives you the ability to bring rich graphics, animation, sound, and video to ordinary web pages on a variety of browsers and operating systems.

Who Is This Book For?

This book is intended as a primer for professional developers who have a reasonable knowledge of server-side web development. This book doesn't provide an exhaustive look at every ingredient in the .NET Framework—in fact, such a book would require twice as many pages. Instead, this book aims to provide an intelligent introduction to ASP.NET for professional programmers who don't want to rehash the basics. Along the way, you'll focus on other corners of the .NET Framework that you'll need in order to build professional web applications, including data access and XML. Using these features, you'll be able to create next-generation websites with the best tools on hand today.

This book is also relentlessly practical. You won't just learn about *features*—you'll also learn about the real-world *techniques* that can take your website to the next level. Later chapters are dedicated to cutting-edge topics such as custom controls, dynamic graphics, advanced security, and high-performance data access, all with the goal of giving you everything you need to build professional web applications.

To get the most from this book, you should be familiar with the syntax of the C# language and with object-oriented concepts. You don't need to have experience with a previous version of ASP.NET, as all the fundamentals are covered in this book. If you're an experienced Java or C++ developer with no .NET experience, you should consider supplementing this book with an introduction to .NET, such as *Pro C# 2008 and the .NET 3.5 Platform*, by Andrew Troelsen (Apress, 2007).

What Do You Need to Use This Book?

To develop and test ASP.NET web applications, you need Visual Studio 2008. Although you could theoretically write code by hand, the sheer tedium and the likelihood of error mean this approach is never used in a professional environment.

Note You can use the scaled-down Visual Studio Web Developer 2008 Express Edition, but you'll run into significant limitations on some of the examples. Most important, you can't use Visual Studio Web Developer 2008 Express Edition to create class libraries, which are an essential part of modern component-oriented design (although you can work around this limitation by using *two* express editions—Visual Studio Web Developer Express Edition to create your websites and Visual C# 2008 Express Edition to create your components).

Additionally, if you plan to host ASP.NET websites, you'll need to use Windows XP Professional or (ideally) a server-based version of Windows, such as Windows Server 2003 or Windows Server 2008. You'll also need to install IIS (Internet Information Services), the web hosting software that's part of the Windows operating system. IIS is described in Chapter 18.

This book includes several examples that use sample databases that are included with SQL Server to demonstrate data access code, security techniques, and other features. You can use any version of SQL Server to try these examples, including SQL Server 2005 Express Edition, which is included with some versions of Visual Studio (and freely downloadable at <http://www.microsoft.com/sqlserver/2005/>). If you use other relational database engines, the same concepts will apply, but you will need to modify the example code.

Finally, to use the Silverlight examples in Chapter 33, you'll want to have the Silverlight Tools for Visual Studio, which you can download from <http://silverlight.net/GetStarted>. The Silverlight Tools for Visual Studio include all the components you need to design, run, and debug Silverlight 2 applications, including the Silverlight runtime, the Silverlight SDK, and the Silverlight add-in for Visual Studio. Chapter 33 has more details.

Customer Support

We always value hearing from our readers, and we want to know what you think about this book—what you liked, what you didn't like, and what you think we can do better next time. You can send your comments by e-mail to feedback@apress.com. Please be sure to mention the book title in your message.

Sample Code

To download the sample code, visit the Apress website at <http://www.apress.com>, and search for this book. You can then download the sample code, which is compressed into a single ZIP file. Before you use the code, you'll need to uncompress it using a utility such as WinZip. Code is arranged into separate directories by chapter. Before using the code, refer to the accompanying `readme.txt` file for information about other prerequisites and considerations.

Bonus Chapters

The Apress website also includes several additional chapters that you can download as PDFs. These chapters include content that couldn't be included in this book (due to space requirements) and isn't considered as important to ASP.NET web development. Here's what you'll find:

Bonus Chapter 1: This chapter describes how to use resources and localization in ASP.NET websites. It's an essential chapter for developers who need to create websites that can be viewed in multiple languages.

Bonus Chapters 2, 3, and 4: These chapters tackle *web services*, a feature that allows you to create code routines that can be called by other applications over the Internet. Web services are most interesting when considering rich client development (because they allow you to give web features to ordinary desktop applications), and they're in the process of being replaced by a new technology known as WCF (Windows Communication Foundation). For those reasons, web services aren't covered in detail in this book. However, you *will* consider how to use web services to extend the reach of your web pages with ASP.NET AJAX in Chapter 32 and Silverlight in Chapter 33.

Note The web service chapters are reprinted from the previous edition of this book. The information in these chapters still applies to ASP.NET 3.5, because the web service feature hasn't changed.

Errata

We've made every effort to make sure the text and the code contain no errors. However, no one is perfect, and mistakes do occur. If you find an error in the book, such as a spelling mistake or a faulty piece of code, we would be grateful to hear about it. By sending in errata, you may save another reader hours of frustration, and you'll be helping us to provide higher-quality information. Simply e-mail the problem to support@apress.com, where your information will be checked and posted on the errata page or used in subsequent editions of the book. You can view errata from the book's detail page.
